

Results from National Test Labs on the Chanson Nano filter on 2-21-11, are as follows;

1. Total dissolved solids (TDS) reduced by 85%.
2. Copper reduced by 99%
3. Fluoride reduced by 99%
4. Nitrates reduced by 99%
5. Sulfates reduced by 99%
6. Bromodichloromethane reduced by 99.9%
7. Chloroform reduced by 99%
8. THM's reduced by 99%
9. Dibromochloromethane reduced by 99.9%
10. Chlorine reduced by 99.7%
11. Chloramine reduced by 99.7%
12. Chloride reduced by 98%
13. Vinyl chloride reduced by 99%
14. Water hardness reduced by 95%

These are the contaminants found in Laguna Hills California tap water supplied by the El Toro water district, the testing confirms that the Chanson Nano filter is able to perfect tap water that would be previously unhealthy to consume. It is important to understand that a 99% removal rate can leave less than .01 parts per billion of a contaminant in the water, this is equivalent to one drop of a contaminant in an entire swimming pool, We consume far more contaminants with a single breathe of air than you would from drinking this water for an entire week!

Testing performed by National Test Laboratories - an EPA standards water testing Laboratory.
